- 21 - 25
- 26 - 32

* Base case assumes implementation of existing Clean Air Act programs and the proposed nonroad diesel rule.

Projected nitrogen deposition changes in 2015, compared to the base case*

By 2010, nitrogen deposition would be lower – up to 15 percent in many areas of the eastern U.S.

Estimates for 2015 show additional and larger reductions across a broader region in the East.
